

INSTA-STIK

Professional Roofing Adhesive

INSTA-STIK professional roof adhesive is a single component polyurethane adhesive dispensed from a portable, disposable pre-pressurized container requiring no external power source.

INSTA-STIK adhesive is used to attach compatible roof insulation boards to roof decks and substrates in new construction and roof replacement applications. This includes insulation board to insulation board, insulation board to Class 1 non-graveled (bald) built-up roofs for recover applications and insulation or gypsum board to 22 gauge and thicker steel decks and wood decks.

On wood decks, insulation is securely held without damaging the structural integrity of the wood deck. When the underside of the deck is visible, there are no unsightly fastener points sticking through.

INSTA-STIK is also the smart choice for metal decks. Use it when the project demands that no fasteners penetrate the deck due to electrical conduits, exposed underside of deck, thermal bridging concerns, or environmental conditions.

Wood Deck:

Adheres on wood decks whenever metal fasteners are not desired.

Concrete Deck:

No tedious and noisy Pre-drilling required.

Metal Deck:

When the project demands no fasteners penetrate the deck due to certain conditions

INSTA-STIK vs. Hot Asphalt

Architect, Specifier or Engineer

- No building height restriction
- No EPA restrictions

Building Owner

- No asphalt contamination
- No offensive fumes
- No potential spillage

Applicator

- No potential burns
- No messy cleanup
- 100% coverage not required
- No obnoxious fumes

Contractor

- No primer required
- No thin film problems
- Reduced insurance costs
- No building height restriction
- No capital investment in equipment
- No messy cleanup
- No EPA restrictions on use in congested areas
- No external power source required
- Doesn't melt polystyrene insulation
- Insulation boards can be repositioned up to several minutes after placement
