Product: **PermaLath 1000 with stucco**

PermaLath and PermaLath 1000 have been used successfully in commercial and residential jobs across the United States. The contractors listed can be contacted for references.

Permalath® is a patent-pending, non-metallic lath reinforcement that is a superior alternative to metal lath and stucco netting. It offers numerous benefits such as easier handling, enhanced safety during installation, reduced installation labor and elimination of corrosion.

PermaLath is available in two versions. The original PermaLath was designed specifically for use in the 3/8" to 1/2" thick stucco systems, and PermaLath 1000 was developed for traditional, three-coat 1/2" to 7/8" thick stucco systems.

If you're still handling traditional metal lath, it's time for change. Call BASF or visit our website for more information about PermaLath and PermaLath 1000.
