

## **Disposable Concealed Blade Safety Knife** **(Wind-lock Part Code I-SK15)**

This compact, durable knife begins with an ultra-sharp stainless-steel blade in a protected blade channel for ultimate user safety. The stainless-steel blade requires less pulling force per cut equaling longer blade life while reducing user fatigue.

Additionally, workers never touch a blade - when the blade gets dull on both sides, simply throw it away and replace with a new one. No blade changes ever required. Great for cutting poly!

The durable plastic handle has blunt plastic piercing tips on each blade end. These tips grab into materials to initiate cutting while also encasing the blade ends. The I-SK15 Disposable Concealed Blade Safety Knife features unique flow-through cutting channels that reduce friction to allow for easy cutting of materials up to 4mm thick (0.16") without gumming up.

The dual-sided blades extend the life of this Level 3 Safety Knife for twice the work of single-blade competitors.

The handle has a wedge-shaped nose that acts as a splitter for puncturing and opening packing tape. The oversized loop at the end of the handle allows the tool to be hung from a hook or tethered to a lanyard for safety.

### **Great for Cutting:**

- **Bagged Goods**
- **1 and 2-Ply Corrugate**
- **Coated Film**
- **Plastic/Poly sheeting**
- **Plastic Strapping Bands**
- **Nylon Straps**
- **Stretch/Shrink-wrap, Foil**
- **Tape and More**
