SOLD SEPARATELY

## EIFS & ICF FOAM CUTTING TOOL

The G2 Hot Knife from Wind-lock is the next generation in Hot Knives. Like its predecessor, the Gen2 version is the “go-to” tool for professionals working with EIFS, ICF, SIPs, EPS, and XPS foam.

With up to 220W of power, the G2 Hot Knife reaches temperatures in the neighborhood of 600° in seconds allowing you to accurately cut foam without leaving behind a foam particle mess. The dual, built-in cooling fans help protect your Hot Knife from overheating during moderate-heavy use.

### Kit Includes:

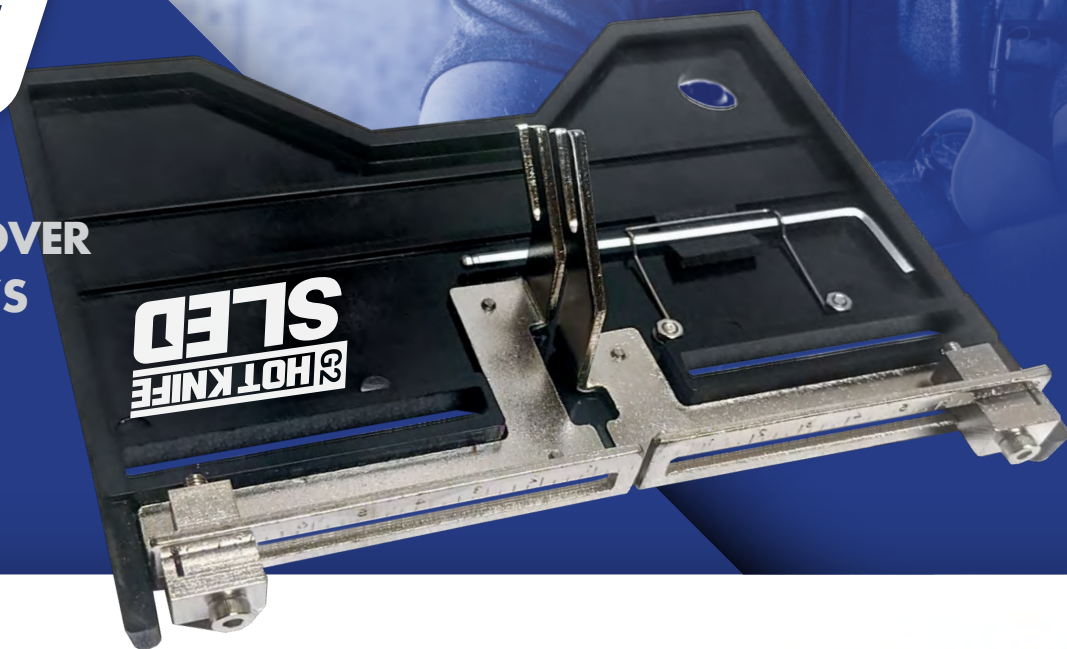

- Hot Knife
- 12" Flat Blade
- Protective Case
- 8" Straight Blade
- Wire Brush
- Spanner

**CAUTION:** Avoid direct short circuit between cutting heads. Do not use metallic rulers for guiding the blade. Always operate the G2 Hot Knife in well ventilated space. Never burn off the excess residue on the G2 Hot Knife blade; the blades will overheat & warp. G2 Hot Knife should not be operated for more than 15 seconds per cut. Keep Hot Knife blades away from skin, clothing & other flammable materials. Allow blades to cool before handling; G2 Hot Knife may cause injury or burns to exposed surfaces. If the temperature inside the tool gets too high the unit will overheat & the internal thermal protectors will engage & switch it off. After cooling occurs, the G2 Hot Knife will become operational again.
